Periodic : A Game of The Elements

Publié le 14.02.23 | Par Emma Monnier

"Periodic : A Game of The Elements" est un jeu de stratégie anglophone autour du tableau périodique des éléments. Une façon ludique de s'intéresser au tableau périodique, tout en pratiquant l'anglais!

Ce jeau est adapté aux collégiens et lycéens. Une description en anglais vous est proposée ci-après :

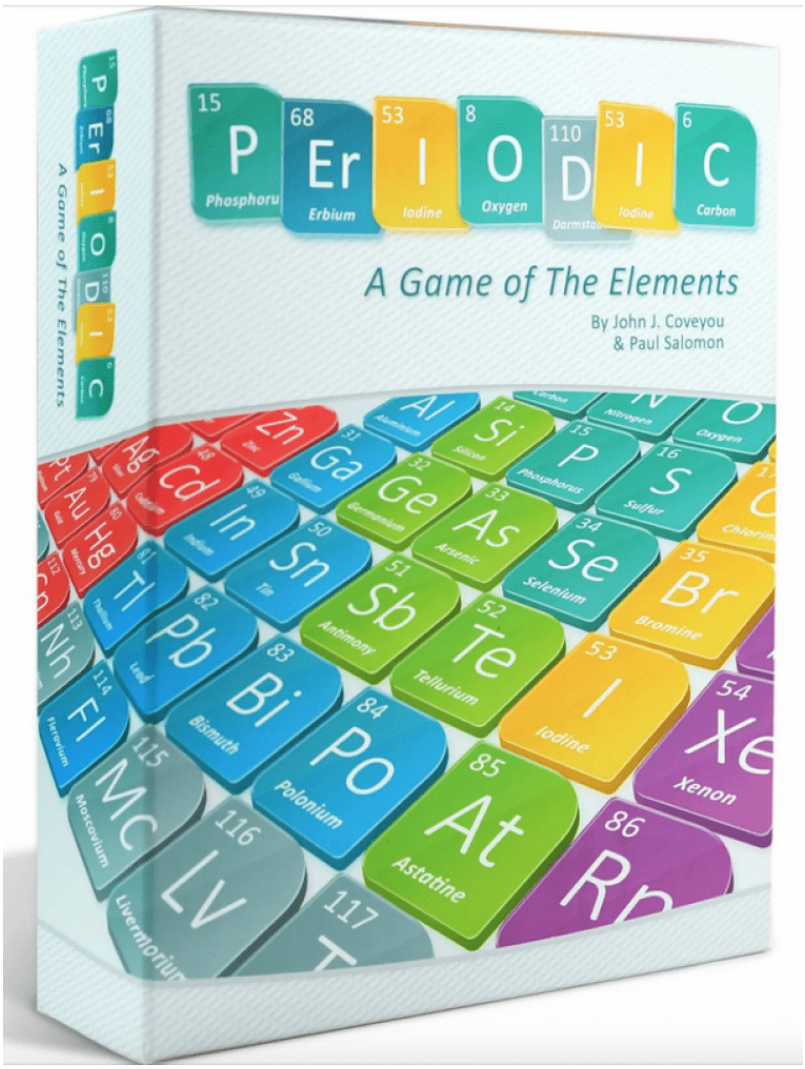

"Periodic : A Game of The Elements" is a strategy board game designed around the periodic table of elements. Players will also get familiar with the most fundamental principles in chemistry that can be derived from the structure and function of the periodic table.

It is a 2 to 5 players game, recommended for players older than 10 years old. It is a funny way to get familiar with the main topics of chemistry.

The game turns the periodic table into a obstacle course. Players race around the periodic table to collect elements. To discover new elements, and then score points, players navigate through the different trends of the table such as the atomic radius or the atomic number. Players either pay energy to use multiple periodic trends to move across the table, or select just one trend and collect all the energy payed to that trend!

The goal : having the bigger amount of health point at the end !
